

CONTINUOUS IMPROVEMENT UPDATE

READY-MIX AUTO-CONSUMPTION MONITOR

The Supply Chain and Continuous Improvement Teams are happy to announce the rollout of the new Ready-Mix Auto-Consumption Monitor.

Before:

When there was an issue of material being auto-consumed using the Command Batch system, the errors were logged on a report, and the plants needed to consume the material manually.

After:

With the introduction of the new AC Monitor, the monitor team is now able to reprocess those attempts with a few clicks and without any manual consumptions done by the plant personnel.

This will save time and efforts for the plants and will have a great impact on maintaining accurate inventory levels in real time.
