

SUSTAINABILITY WEEK

THIS MARCH 23RD

LET'S TURN OFF THE LIGHTS AND GIVE ONE HOUR TO THE PLANET

✓ Earth Hour is a global movement in defense of the environment and nature. It is also a simple but powerful gesture: turn off all the lights of buildings and monuments for one hour.

✓ This initiative was born in Sydney in 2007. More than a decade later, millions of people - in almost 200 countries - are joining this important initiative.

✓ And why is it important?
It is a call that alerts and raises awareness of climate change and efficient energy use.
In Australia - in the first edition of Earth Hour - the reduction in energy consumption ranged between 2.1% and 10.2%. Imagine the impact it could have worldwide!

✓ While at Cementos Argos we give the Green Light to construct a solid infrastructure, we also recognize the importance of efficient energy use.

✓ By 2023, thanks to the efficiency practices we are implementing in our operations, we will reduce electricity consumption in our cement plants by more than 58 million MJ.

✓ We also continue to seek more sustainable energy resources:

1. In Panama, we established a 100% renewable electricity supply contract, mainly from hydroelectric sources.
2. We inaugurated a solar energy farm in Choloma, Honduras, with Celsia, our second solar farm in this country!

✓ The best thing about Earth Hour is that we can all join it. We invite all our co-workers at Argos to be part of this movement

YOU CAN DO IT TOO, JUST TURN OFF THE SWITCH, AND THAT'S IT!
