

DISCOVER THE SPARK OF GREEN LIGHT FROM CEMENTOS ARGOS

At Argos, we produce and sell **cement, concrete, and aggregates**. For nearly 90 years, we have built a history based on sustainability, innovation, environmental stewardship, and a commitment to creating value for the company and society. With a vision for the future, we continue with our purpose of making possible the construction of housing and infrastructure dreams in 16 countries and territories in the Americas.

Our human talent, made up of nearly

4,000 COLLABORATORS,

with their **genuine commitment, audacity, and ability to adapt to the challenges of the environment**, materializes actions that contribute to the consolidation of a more sustainable, prosperous, and inclusive society.

After successfully closing the transaction that combines our operations in the United States with Summit Materials, a company listed on the New York Stock Exchange (NYSE), Argos remains with a **31% participation, being the largest shareholder**, and has three representatives on the Board of Directors. Additionally, the new entity becomes a strategic ally with the signing of complementary agreements to supply cement and other materials and license intellectual property, among other collaborations. **We present how Argos Cement's operation is now:**

RELEVANT DATA

OUR COMMITMENTS

Argos One: we are driving the evolution to the **2.0 version** with the integration of advanced analytics tools.

Digital twins: to have a virtual representation of the plants and access to timely information to achieve cost reductions of **5,5%** equivalent to a savings of 13 million dollars.

Digital manufacturing: we are exploring **Generative Artificial Intelligence** models to revolutionize our manufacturing processes.

Climate change: by 2050 we will produce and sell **carbon-neutral concrete**.

Occupational health and safety: we expect to achieve **0** serious injuries on co-workers and contractors every year.

Talent: by 2030 we expect to have **35%** of women in leadership positions.

3D printing: by 2024 the expected result is to obtain a **habitable home** with this technology.

Casa Para Mí: the goal is to execute **5** projects this year.

Modular Solutions: by 2024 we want to achieve a sales portfolio where **30%** of the total square meters sold correspond to specialized products and the remaining **70%** to housing products.
